

PRATEEK KUMAR

New Delhi, India | kprateek9315@gmail.com | +91 9315784336 | linkedin.com/in/prat33k | github.com/lohaniprateek

SUMMARY

DevOps and Cloud Engineer with **2+ years** of hands-on experience across **CI/CD automation, Infrastructure as Code, and multi-cloud provisioning on AWS and GCP**. Delivered production-grade infrastructure for real clients --- including Terraform drift remediation, **Cloudflare CDN integration, and GitOps deployments**. Red Hat certified with deep Linux and containerisation skills. Strong communicator with a technical writing background and a track record of bridging DevOps practices into development teams. Open to **Junior DevOps, Associate Cloud, and Solution Architect** roles.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, RDS, S3, Lambda), GCP (VM, Artifact Registry, Memorystore, DNS Zone, GKE), OCI

DevOps & CI/CD: Jenkins, GitHub Actions, GitLab CI

Containers & Orchestration: Docker, Kubernetes (K3s, GKE), Helm, kubectl

Infrastructure as Code (IaC): Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana, k6 (load testing)

Networking & CDN: Nginx, Traefik, Cloudflare (CDN, Caching, Reverse Proxy, DNS)

Scripting & Programming: Bash, Python, Go, YAML, SQL

OS & Databases: Linux (Red Hat, Ubuntu), PostgreSQL, MySQL, Redis

PROFESSIONAL EXPERIENCE

DevOps Engineer Apprenticeship

Present

Blink Tech

Remote

- Sole DevOps engineer managing end-to-end GCP infrastructure for two production applications --- **provisioned VMs, reserved IPs, DNS zones, firewall rules, and PostgreSQL databases**; connected domains via Hostinger and Cloudflare across both projects.
- Architected and deployed containerised stacks (frontend, backend, PostgreSQL) using **Docker Compose** on GCP e2-small VMs, served via Nginx reverse proxy --- optimised for lightweight workloads and cost efficiency.
- Integrated Cloudflare as reverse proxy across both projects (User → Domain → Cloudflare → VM) --- **configured SSL/TLS, cache rules, and firewall policies**; validated caching achieving `cf-cache-status: HIT` on repeat requests.
- Built **GitHub Actions CI/CD pipelines** automating build, test, and push to **GCP Artifact Registry** (asia-south1) --- migrated from deprecated GCR, cutting image delivery latency for the South Asia region.
- Provisioned **GCP Memorystore (Redis, asia-south1-c, 1GB)** and integrated server-side caching into the Node.js backend --- reducing repeated DB hits and improving response times for elytarot.com, a live AI tarot reading platform.
- Migrated production **Node.js/Next.js and PostgreSQL** workloads to a **self-managed K3s Kubernetes cluster** on GCP --- configured persistent volumes, Kubernetes Secrets, **Traefik ingress**, and Artifact Registry auth via service accounts; achieved **zero-downtime rolling deployments**. Conducted load testing with **k6** at 2000 concurrent VUs to benchmark cluster throughput.
- Built a **shell-based observability script** tracking service uptime and log anomalies across production VMs --- proactively surfaced a storage exhaustion event caused by accumulated Docker image layers before it impacted availability.

DevOps Engineer Intern

Sept 2025 -- Mar 2026

Qappa Labs

Remote

- Engineered a **Terraform-based infrastructure sync system** to detect and reconcile manual cloud configuration changes --- validated across **15+ test scenarios** involving EC2 instances, S3 buckets, remote backends, and security groups, reducing **configuration drift by ~45%** across 3 environments.
- Designed a **three-source comparison engine** with deterministic drift classification; wrote and executed test cases spinning up multiple AWS instances and S3 remote backend states to verify edge cases, preventing accidental destructive operations and improving infrastructure compliance.
- Built a **safety-first CLI workflow** with automatic Terraform state backups and structured JSON outputs across dev, staging, and production --- significantly reduced incident response time for the on-call team.
- Developed **IaC pipelines** using Terraform and Ansible for multi-environment cloud provisioning; collaborated with the dev team to **onboard Terraform tooling** and bridge DevOps practices into their development cycle --- reducing environment setup friction by ~50%.

Freelance DevOps Engineer

Oct 2024 -- Feb 2025

Contract

Remote

- Designed and provisioned **end-to-end AWS infrastructure** from scratch, self-hosting GitLab on EC2 as the central version control platform and configuring **IAM roles** for secure, role-based developer access.
- Set up and maintained **GitLab Runner on EC2**, building and managing automated CI/CD pipelines to streamline the build, test, and deployment process.
- Configured pipelines to automatically package and store **app binaries and artifacts in Amazon S3**, ensuring reliable and versioned build storage.

- Developed and deployed a **landing page integrated with S3**, enabling end users to directly download the latest app binary seamlessly.

Web Administrator / Site Reliability Engineer

Mar 2023 -- Mar 2024

Vishnu Seva Trust

Remote, Freelance

- Managed and maintained a **production fundraising web platform** for an NGO end-to-end, ensuring **95%+ uptime** over 12 months of continuous operation.
- Administered **domain configuration and DNS management**, handling renewals, routing, and SSL certificate upkeep to ensure uninterrupted donor-facing availability.
- Monitored platform health and responded to availability issues proactively, applying **SRE principles** of observability and incident response in a solo ownership capacity.

PROJECTS

TerraSync --- Terraform Drift Detection & Reconciliation Engine | *Terraform, AWS, Go, Bash*

Sept 2025 -- Mar 2026

- Engineered a **three-source comparison system** using Terraform state files to detect and auto-remediate infrastructure drift --- mirroring core patterns used in enterprise **Terraform Enterprise (TFE)** compliance workflows.
- Wrote and executed comprehensive test scenarios across EC2 instances, S3 remote backends, and security groups to validate edge cases, ensuring **safe and deterministic IaC reconciliation**.

CI/CD Pipeline --- Jenkins & Docker-in-Docker | *Jenkins, Docker, Docker Compose*

- Architected an end-to-end **Jenkins CI/CD pipeline** for a Node.js app using Docker-in-Docker; automated builds, tests, and deployments, cutting manual release steps by **~60%**.
- Replaced cloud VM dependency with Docker Compose local infrastructure, ensuring reproducible builds and consistent environments across developer machines.

GitOps Deployment with Argo CD | *Argo CD, Kubernetes, Git*

- Implemented a **GitOps-based deployment model** using Argo CD as single source of truth, enabling version-controlled infrastructure changes with one-click rollback --- reducing **MTTR by ~40%**.

V-Profile: Multi-Tier Lift & Shift to AWS | *AWS, Terraform, RDS, Elastic Beanstalk*

- Migrated a multi-tier application to AWS (RDS, Elastic Beanstalk, ElastiCache, ActiveMQ); automated provisioning with Terraform, reducing **setup time from hours to under 10 minutes**.

Proactive SSL/TLS Certificate Monitoring CLI | *Go, CLI, Automation*

- Built a **Go-based CLI tool** monitoring SSL/TLS expiry and trust chain across **10+ domains** with configurable alerting thresholds, achieving **zero unplanned SSL-related downtime**.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Aug 2021 - Aug 2025

Uttarakhand Technical University

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Foundations Associate

Google Cloud --- Gemini AI Labs, Technical Series (OnBoard Edition)

Red Hat --- System Administration: RH-104, RH-124, RH-134

Udemy --- DevOps Masterclass: AWS, Linux, Jenkins, Ansible, Docker, Kubernetes

ADDITIONAL

Technical Writing --- Medium blogger covering Linux, DevOps, and cloud engineering topics -- @lohaniprateek

Open Source --- GitLab Community Contributor @lohaniprateek
